Education

University of Indianapolis

Bachelor of Software Engineering | Minor: Mathematics

- UIndy Academics Scholarship | GPA: 3.68/4.0
- Courses: Software Engineering Practice, Machine Learning, Distributed Systems, Data Structures & Algorithms, Intro. to Software Engineering, Operating Systems, Software Architecture

Expected Graduation: May 2028

Indianapolis, IN

Work Experience

Clouser Painting Digital

Founder & Full-Stack Developer

- Drove a 25% surge in client acquisition within 30 days through the end-to-end design and deployment of a professional quality digital platform using React, Node.js/Express, and PostgreSQL.
- Engineered quick backend infrastructure achieving sub-100ms API latency through advanced optimization, schema normalization, and intelligent caching using Express middleware and PostgreSQL query indexing.
- Delivered a 20% ROI in a single sprint cycle through the strategic execution of SEO and conversion optimization campaigns using Google Search Console insights, analytics-driven A/B testing, and targeted keyword refinement.

Jul 2024 – Aug 2024

Indianapolis, IN

Leadership Experience

UIndy Wrestling Team Captain

- Led a 20+ member team to high performance by leveraging data, proven training analytics and personalized performance tracking, resulting in measurable improvements in match outcomes and conditioning efficiency.
- Fostered a culture of discipline and mentorship through structured leadership activities, team development schedules, and private coaching, strengthening collaboration and accountability across the roster.

May 2024 - Present

UIndy Racing Club

- Directed performance optimization and rapid prototyping strategies to enhance vehicle design efficiency and reduce iteration time, applying engineering analytics and agile development principles.
- Coordinated functional collaboration between mechanical, software, and design teams, driving innovation and continuous improvement within the competitive racing environment.

May 2024 - Present

Projects

BunnyHop Investments | [GitHub/BunnyHop-Investments](#)

- Engineered a full-stack trading intelligence system through modular service design, database optimization, and asynchronous API orchestration using FastAPI, React, and PostgreSQL, enabling real-time data ingestion, AI prediction, and scalable performance under load.

PostgreSQL | FastAPI | React

GOTHAM – Global OSINT Threat Heuristic Analysis Machine | [Github/GOTHAM](#)

- Developed GOTHAM, a federated semantic intelligence platform integrating FastAPI, OpenAI embeddings, and Qdrant, performing large-scale text vectorization, heuristic ranking, and GPT-driven summarization for actionable insight generation across Hacker News, Reddit, and Wikipedia.

Technical Skills

Languages: Python, Java, C++, JavaScript/TypeScript, SQL, HTML, CSS

Developer Tools: Git/GitHub, Docker, AWS (EC2, RDS), Vercel, Postman, Linux, VS Code, Jira, Figma

Libraries & Frameworks: React, Node.js, Express, FastAPI, Spring Boot, Next.js, Tailwind CSS, PyTorch, TensorFlow, YOLOv5/v8, OpenCV, Scikit-Learn
